PROFESSIONAL SUMMARY

Data Science and AI Practitioner with practical expertise in Python, SQL, statistical modeling, and predictive analytics. Skilled in data wrangling, feature engineering, and developing functional NLP, computer vision, and Generative AI prototypes. Experienced in executing end-to-end data analysis pipelines and REST API integrations, with a strong technical foundation and commitment to scaling machine learning models into full enterprise deployment.

TECHNICAL SKILLS

Programming Languages: Python, SQL

Data Science & ML: Scikit-learn

Data Analysis & Viz: Pandas, NumPy, Matplotlib, Jupyter Notebook

NLP & Computer Vision: Hugging Face Transformers, NLTK, OpenCV, Whisper, LLaMA 3

Databases & Big Data: ORACLE, PostgreSQL

MLOps & Deployment: Docker, Git, REST APIs, Gradio, Vercel

Cloud & Tools: VS Code, PyCharm, GitHub Actions

Core Competencies: Statistical Analysis, feature engineering, Data Pipelines

EDUCATION

Bachelor of Technology in Computer Science | Vinoba Bhave University, UCET – Hazaribagh | Oct 2022 – AUG 2026

Relevant Coursework: Machine Learning, Data Structures & Algorithms, Database Management Systems, Statistics & Probability, Artificial Intelligence, Linear Algebra

EXPERIENCE

Python & Data Science Intern – Cognifyz Technologies, Nagpur (Remote)

Jun 2025 – Jul 2025

- Designed and delivered Python-based data science projects across three progressive difficulty levels, applying data manipulation, statistical analysis, and automation techniques.
- Performed exploratory data analysis (EDA) and data preprocessing using Pandas and NumPy to clean, transform, and extract insights from structured datasets.
- Integrated system-level automation using Python modules (os, subprocess) to build efficient data processing pipelines.

HR Observer Intern – Steel Authority of India Limited (SAIL), Bokaro

Jun 2024 – Jul 2024

- Gained exposure to HRIS platforms and employee data workflows, building foundational knowledge of structured enterprise data management.
- Assisted in documentation and data entry for training programs, performance appraisals, and leave management systems.
- Observed compliance tracking processes, providing insight into data governance and audit practices in large-scale organizations.

PROJECTS

AI Doctor 2.0 – Multimodal Medical Diagnostic System | Python, Groq, LLaMA 3, Whisper, OpenCV, Gradio | 2026

- Engineered a multimodal AI diagnostic chatbot that processes medical images (X-rays, lab reports), natural language text, and voice input to assist in preliminary diagnosis.
- Implemented computer vision pipeline using OpenCV and vision-language models to analyse and interpret medical imaging data with clinical context.
- Built an end-to-end speech-to-text pipeline with OpenAI Whisper for voice input, integrated with LLaMA 3 via Groq API for real-time LLM inference.
- Designed a Gradio-based interactive dashboard for clinicians, combining text-to-speech output and multi-format data ingestion with **40% faster query resolution** vs. manual search.
- Proposed a roadmap for fine-tuning vision-language models on domain-specific medical datasets and adding multilingual support for regional healthcare deployment.

AI Jarvis – Intelligent Voice-Controlled Desktop Assistant | Python, Speech Recognition, NLP, PyWin32 | 2025

- Developed an NLP-powered voice assistant that automates desktop workflows including web browsing, application control, and system task execution using natural language commands.
- Integrated Google Speech Recognition API and Microsoft SAPI for robust speech-to-text and text-to-speech, achieving **92% command recognition accuracy** in real-world testing.
- Implemented intent classification module to parse and route 30+ unique commands, reducing manual task execution time by approximately 60%.

VS Code-Themed Developer Portfolio Website | Next.js 15, React, TypeScript, CSS Modules | 2025

- Engineered a fully responsive, SEO-optimized portfolio website using Next.js React Server Components, achieving 95+Lighthouse performance score.
- Implemented secure backend API routes for contact forms with server-side validation, deployed on Vercel with CI/CD pipeline via GitHub Actions.

CERTIFICATIONS & ACHIEVEMENTS

- Completed 3-level Python & AI project internship at Cognifyz Technologies with capstone deployment
- Built and deployed production-grade AI applications covering NLP, computer vision, and voice interfaces
